React JS

Week 13 HW

1. Refactor the to-do app you implemented last week

    - Modularize your app using ES6 modules.
    - You can create as many modules as you'd like.
    - Recommendation: You can create modules such as utilities, http , DOM etc.
    - Be sure to use named AND default exports/imports.

2. Create a Flashing text effect using JQuery.
   EXAMPLE

3. Create a **striped** table using JQuery.

Month	Sales	Amount
January	85	$13,555.00
February	73	$9500.00
March	135	$18,000.00
April	45	$27,500.00
May	69	$13,000.00
June	105	$20,500.00

4. Disable Right Click on a page using JQuery.

5. Determine when the user presses the Enter key with JQuery and count the number of times the key is pressed.

6. Create a Login button in an HTML file. Then with JQuery, **change** the button to Log out and also change the style accordingly.

EXAMPLE DESIGN:

scores	
Question 1	35
Question 2	15
Question 3	15
Question 4	15
Question 5	10
Question 6	10

SUBMISSION NOTES

1. Compress your homework into a single compressed file (.rar or .zip)
2. Create a repository for the homework in GitHub and give access to your TAs.
3. The name should have the following format: name_hw1_maktab99
   example: MohammadAli_Kargar_hw1_maktab85
4. Create a description word document for your questions if necessary
5. Submit your file in LMS before due date.
6. If you have any questions, feel free to ask in Rocket Chat.

Best of Luck and Happy Coding!
